

BALL VALVES AND FITTINGS

**dynamic
precise
safe**

vonScheven

H E R A C L I T U S EVERYTHING FLOWS

The dynamics of fluids has formed an integral part of our business for three generations.

The chemical structures and physical states involved are as varied as our range of ball valves and fittings. These form part of sophisticated plant systems, where they are, so to speak, the ultimate decision-makers. They can open a path or block it – whichever your material flow management system dictates. Just like industrial innovations, the number of new ball valves we develop increases year on year.

We'll be happy to tell you all about them in the latest copy of our PIN product brochure, an application-specific publication produced by our company.

2-way flange ball valve with DIN flange connection

Flange ball valve	Ductile cast iron	DIN flange	32 - 250	max. 16	KFK-B	70 ●
Short face-to-face length	Steel		15 - 250	max. 40	KFK-C	74 ●
G27 (F4/F5)	Stainless steel		15 - 250	max. 40	KFK-D	78 ●

Stainless steel ball valve	Stainless steel	DIN flange	15 - 200	max. 40	EFK	82 ●
Economy series						

Flange ball valve	Ductile cast iron	DIN flange	25 - 200	max. 16	KFL-B	84 ●
Long face-to-face length	Steel		10 - 250	max. 320	KFL-C	88 ●
G1 (F1)	Stainless steel		10 - 50	max. 320	KFL-D	94 ●

Compact flange ball valve	Steel	DIN flange	15 - 200	max. 40	K-KFK-C	98 ●
Compact face-to-face length	Stainless steel		10 - 100	max. 40	K-KFK-D	102 ●

Compact ball valve	Steel	DIN flange	15 - 200	max. 40	K-KFK-CE	106 ●
Economy series	Stainless steel		15 - 200	max. 40	K-KFK-DE	108 ●

Flange ball valve with ceramic lining	Ductile cast iron	DIN flange	50 - 125	max. 16	KFK-BK	110 ●
---------------------------------------	-------------------	------------	----------	---------	--------	-------

2-way ball valves with ANSI flange connection

Flange ball valve	Steel	ANSI flange	15 - 200	max. Class 1500	KFB-C	112 ●
ANSI face-to-face length	Stainless steel		15 - 200	max. Class 1500	KFB-D	112 ●

Flange ball valve	Steel	ANSI flange	10 - 100	max. Class 1500	K-KFB-C	116 ●
Compact face-to-face length						

2-way ball valves with SAE flange connection

Ball valve for SAE half flanges	Steel	Pipe bundle SAE half flanges	15 - 80	max. 420 (6000 psi)	KSAE-C	118 ●
---------------------------------	-------	------------------------------	---------	---------------------	--------	-------

Ball valve with AE flanges	Steel	SAE flange	15 - 80	max. 420 (6000 psi)	KSAE-DR-C	120 ●

2-way ball valves with weld ends

Ball valve	Steel	Detachable weld ends	08 - 50	max. 40	NSK-AL-C	124 ●
------------	-------	----------------------	---------	---------	----------	-------

Ball valve as drain valve	Steel	Detachable weld end and closing cap	10 - 50	max. 40	SEL-C	126 ●
---------------------------	-------	-------------------------------------	---------	---------	-------	-------

Ball valve	Steel	Fixed weld ends	08 - 50	max. 40	NSK-AF-C	128 ●
				max. 400	HSK-AF-C	128 ●
	Stainless steel		08 - 25	max. 40	NB-AF-D	130 ●
				max. 400	HB-AF-D	130 ●
	Stainless steel		32 - 50	max. 40	NSK-AF-D	130 ●
				max. 400	HSK-AF-D	130 ●

Ball valve as drain valve	Steel	Fixed weld end and closing cap	08 - 50	max. 40	SEF-C	132 ●
---------------------------	-------	--------------------------------	---------	---------	-------	-------

Ball valve fully welded	Steel	Weld ends	08 - 300	max. 40	VSK-C	134 ●
	Stainless steel		10 - 250	max. 40	VSK-D	136 ●

Ball valves for manifold installation

2/2-way high-pressure block ball valve	Steel	Manifold install.	06 - 25	max. 500	HBP-C	140 ●
	Stainless steel		06 - 25	max. 500	HBP-D	140 ●
3/2-way high-pressure block ball valve	Steel	Manifold install.	06 - 25	max. 500	HBPD-C	142 ●
	Stainless steel		06 - 25	max. 500	HBPD-D	142 ●

4/2-way high-pressure block ball valve	Steel	Manifold install.	06 - 25	max. 500	HBVP-C	144 ●
--	-------	-------------------	---------	----------	--------	-------

3-way changeover ball valves

Changeover ball valve	Steel	Female thread	04 - 50	max. 500	DBI-C	148 ●
	Stainless steel	Female thread	04 - 50	max. 500	DBI-D	150 ●

Changeover ball valve	Steel	Male thread	04 - 40	max. 500	DBA-C	152 ●
	Stainless steel	Male thread	04 - 40	max. 500	DBA-D	156 ●

Description	Material	Connection	DN mm	PN bar	Type	Page
-------------	----------	------------	----------	-----------	------	------

Changeover ball valve	Steel	Flange	25 - 100	max. 40	DBF-C	160 ●
	Stainless steel	Flange	25 - 100	max. 40	DBF-D	160 ●

Multiway ball valves (positive overlap)

3-way low-pressure block ball valve	Steel *	Female thread	04 - 25	max. 40	NBDI-C	162 ●
4-way low-pressure block ball valve	Steel *	Female thread	04 - 25	max. 40	NBVI-C	162 ●

3-way low-pressure block ball valve	Steel *	Male thread	04 - 25	max. 40	NBDA-C	164 ●
4-way low-pressure block ball valve	Steel *	Male thread	04 - 25	max. 40	NBVA-C	164 ●

3-way high-pressure block ball valve	Steel *	Female thread	04 - 25	max. 500	HBDI-C	168 ●
4-way high-pressure block ball valve	Steel *	Female thread	04 - 25	max. 500	HBVI-C	168 ●

3-way high-pressure block ball valve	Steel *	Male thread	04 - 25	max. 500	HBDA-C	170 ●
4-way high-pressure block ball valve	Steel *	Male thread	04 - 25	max. 500	HBVA-C	170 ●

*Also available in stainless steel (on request).

For example:

Dockyards

When it comes to logistics, more than 95 % of the world's intercontinental trade is handled by ships. Depending on the geographic region, inland waterway vessels account for up to 60 % of goods transportation. In order to reduce general cargo costs and remain competitive, shipping companies require ever larger and faster ships – particularly for the transport of containers. This represents a sizeable challenge for dockyards and engineers as well as the equipment deployed in this field. Our ball valves are equal to this challenge, reliably managing the flow of various welding and cutting gases.

Low-pressure block ball valve NBI-C, steel With female thread

DN 4 - 25 mm PN max. 100 bar

Series 06 – female thread on both sides DIN EN ISO 228-1
42 – NPT female thread ANSI/ASME B1.20.1

Face-to-face lengths DIN 3202 – 4 series M3

Temperature range Standard: -10°C to +150°C; DVGW -20°C to +60°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Approvals Series 06: DVGW for gas PN 16

Technical specification The NBI-C type ball valve consists of a block body with connector screwed in on both sides. The stem is fitted blowout-proof from the outside. Simple replacement of the stem seal is ensured by the fitting used. Actuators can be attached by means of an extension kit. This retrofit requirement must be specified when placing the order (additional charge).

Please ask separately for requirements that exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the safety information provided in the operating and servicing manual must be observed!

The operating and servicing manuals as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

Due to the design, not all items are used for all nominal widths.

High-pressure block ball valve HBI-D, stainless steel

With female thread

DN 4 - 25 mm PN max. 500 bar

Series 06 – female thread on both sides DIN EN ISO 228-1
42 – NPT female thread ANSI/ASME B1.20.1

Face-to-face lengths DIN 3202 – 4 series M3

Temperature range Standard: -10°C bis +90°C
On request: -50°C bis +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification The HBI-D type ball valve consists of a block body with connector screwed in on both sides. The stem is fitted blowout-proof. Actuators can be attached by means of an extension kit. This retrofit requirement must be specified when placing the order (additional charge).

Please ask separately for requirements that exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the safety information provided in the operating and servicing manual must be observed!

The operating and servicing manuals as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

Low-pressure block ball valve NBA-C, steel With male thread

DN 4-25 mm PN max. 100 bar

- Series**
- 02 – male thread on both sides for non-soldering compression fittings with cutting ring DIN 2353 – light-duty series
 - 03 – male thread on both sides for non-soldering compression fittings with cutting ring DIN 2353 – heavy-duty series
 - 05 – male thread on both sides flat sealing pipe thread DIN EN ISO 228-1
 - 44 – male thread on both sides flat sealing NPT ANSI/ASME B 1.20.1

Face-to-face lengths DIN 3202 – 5 series V 1

Temperature range Standard: -10°C to +150°C; DVGW -20°C to +60°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Approvals Series 02 and 03: DVGW for gas
TÜV-Component mark

Technical specification The NBA-C type ball valve consists of a block body with connector screwed in on both sides. The stem is fitted blowout-proof from the outside. Simple replacement of the stem seal is ensured by the fitting used. Actuators can be attached by means of an extension kit. This retrofit requirement must be specified when placing the order (additional charge).

*Standard (can vary according to nominal width), other materials on request.
Due to the design, not all items are used for all nominal widths.

Please ask separately for requirements that exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the safety information provided in the operating and servicing manual must be observed!

The operating and servicing manuals as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

High-pressure block ball valve HBA-D, stainless steel

With male thread

DN 4 - 25 mm PN max. 500 bar

- Series**
- 02 – male thread on both sides for non-soldering compression fittings with cutting ring DIN 2353 – light-duty series
 - 03 – male thread on both sides for non-soldering compression fittings with cutting ring DIN 2353 – heavy-duty series
 - 05 – male thread on both sides flat sealing for pipe thread DIN EN ISO 228 - 1
 - 44 – male thread on both sides flat sealing NPT ANSI/ASME B 1.20.1

Face-to-face lengths DIN 3202 – 5 series V1

Temperature range Standard: -10°C to +90°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification The HBA-D type ball valve consists of a block body with connector screwed in on both sides. The stem is fitted blowout-proof. Actuators can be attached by means of an extension kit. This retrofit requirement must be specified when placing the order (additional charge).

Low-pressure ball valve NSKI-C, steel With female thread

DN 6 - 80 mm PN max. 100 bar

Series 06 – female thread on both sides DIN EN ISO 228-1
42 – NPT female thread ANSI /ASME B1.20.1

Face-to-face lengths DIN 3202 – 4 series M3

Temperature range Standard: -10°C to +150°C; DVGW -20°C to +60°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Approvals Series 06: DVGW for gas PN 16 DN 6 to DN 50

Technical specification The NSKI-C type ball valve consists of a forged body with connector screwed in on one or both sides. The stem is blowout-proof. Up to nominal width DN 25, the stem is fitted from the outside by means of a fitting. Simple replacement of the stem seal is ensured by the fitting used. A stem seal in accordance with the German Technical Instructions on Air Quality Control (TA Luft) is available as standard from nominal width DN 32 and can be used, on request, up to nominal width DN 25 for an additional charge. Actuators can be attached, from nominal width DN 32, by means of an extension kit. This retrofit requirement is available as standard.

Please ask separately for requirements that exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the safety information provided in the operating and servicing manual must be observed!

The operating and servicing manuals as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

* Standard (can vary according to nominal width), other materials on request.

Due to the design, not all items are used for all nominal widths.

High-pressure ball valve HSKI-D, stainless steel With female thread

DN 32 - 50 mm PN max. 320 bar
Up to DN 25 please revert to type HBI-D.

Series 06 – female thread on both sides DIN EN ISO 228-1
42 – NPT female thread ANSI/ASME B1.20.1

Face-to-face lengths DIN 3202 – 4 series M3

Temperature range Standard: -10°C to +90°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification The HSKI-D type ball valve consists of a forged body with connector screwed in on one or both sides. A stem seal in accordance with the German Technical Instructions on Air Quality Control (TA Luft) is available as standard from nominal width DN 32. Actuators can be attached, from nominal width DN 32, by means of an extension kit. This retrofit requirement is available as standard.

Please ask separately for requirements that exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the safety information provided in the operating and servicing manual must be observed!

The operating and servicing manuals as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

Low-pressure ball valve NSKA-C, steel With male thread

DN 6 - 40 mm PN max. 100 bar

- Series**
- 02 – male thread on both sides for non-soldering compression fittings with cutting ring DIN 2353 – light-duty series
 - 03 – male thread on both sides for non-soldering compression fittings with cutting ring DIN 2353 – heavy-duty series
 - 05 – male thread on both sides flat sealing for pipe thread DIN EN ISO 228-1
 - 44 – male thread on both sides flat sealing NPT ANSI/ASME B 1.20.1

Face-to-face lengths DIN 3202 – 5 series V1

Temperature range Standard: -10°C to +150°C; DVGW -20°C to +20°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Approvals Series 02 and 03: DVGW for gas
TÜV-Component mark

Technical specification The NSKA-C type ball valve consists of a forged body with connector screwed in on one or both sides. The stem is blowout-proof. Up to nominal width DN 25, the stem is fitted from the outside by means of a fitting. Simple replacement of the stem seal is ensured by the fitting used. A stem seal in accordance with the German Technical Instructions on Air Quality Control (TA Luft) is available as standard from nominal width DN 32 and can be used, on request, up to nominal width DN 25 for an additional charge. Actuators can be attached, from nominal width DN 32, by means of an extension kit. This retrofit requirement is available as standard.

High-pressure ball valve HSKA-D, stainless steel With male thread

DN 32 - 40 mm PN max. 320 bar

Up to DN 25 please revert to type HBA-D.

- Series** 02 – male thread on both sides for non-soldering compression fittings with cutting ring DIN 2353 - light-duty series
03 – male thread on both sides for non-soldering compression fittings with cutting ring DIN 2353 – heavy-duty series

Face-to-face lengths DIN 3202 – 5 series V1

Temperature range Standard: -10°C to +90°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification The HSKA-D type ball valve consists of a forged body with connector screwed in on one or both sides. The stem is blowout-proof. A stem seal in accordance with the German Technical Instructions on Air Quality Control (TA Luft) is available as standard from nominal width DN 32. Actuators can be attached, from nominal width DN 32, by means of an extension kit. This retrofit requirement is available as standard.

Please ask separately for requirements that exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the safety information provided in the operating and servicing manual must be observed!

The operating and servicing manuals as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

Technical data HSKA-D

Series 02 (for non-soldering compression fittings with cutting ring DIN 2353, light-duty series)

DN mm	RA mm	PN bar	D	i mm	L mm	d mm	Hg mm	R mm	SW1 mm	Weight kg
32	35	320 **	M 45x2	16	145	Ø76	117	250	17	3.5
40	42	320 **	M 52x2	16	150	Ø90	121	250	17	4.1

** On request, a light-duty version (pressure rating PN 160) with altered face-to-face length is also available.
Note! The pressure rating of the pipe unions can deviate from the nominal pressure rating of the ball valve.

Series 03 (for non-soldering compression fittings with cutting ring DIN 2353, heavy-duty series)

DN mm	RA mm	PN bar	D	i mm	L mm	SW mm	Hg mm	R mm	SW1 mm	Weight kg
32	38	320 **	M 52x2	22	145	Ø76	117	250	17	3.5

** On request, a light-duty version (pressure rating PN 160) with altered face-to-face length is also available.
Note! The pressure rating of the pipe unions can deviate from the nominal pressure rating of the ball valve.

Example of order: Ball valve type HSKA-D made of stainless steel, DN 32 with male thread for non-soldering compression fittings with cutting ring DIN 2353 – light-duty series

HSKA-D 32 02

Parts list HSKA-D

Pos.	Designation	Material*

Due to the design, not all items are used for all nominal widths.

High-pressure ball valve EHK-D, stainless steel

With female thread

DN 8 - 20 mm PN max. 2500 bar

Series 07 – female thread on both sides for HP fittings

Temperature range Standard: -20°C to +90°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification The EHK-D type ball valve consists of a round body with connector screwed in on both sides. The stem is fitted blowout-proof. The body and the fittings are provided with vent holes. Actuators can be attached by means of an extension kit. This retrofit requirement must be specified when placing the order (additional charge). The high standard of this high-pressure technology is renowned worldwide due to its reliability, ease of installation and user friendly features.

Only actuate when depressurized!

Options

Lockable

With pneumatic actuator

With pneumatic actuator and limit switch

With inductive limit switches

3-way changeover ball valve

Please ask separately for requirements that exceed the standard conditions of use listed in this data sheet.

Block ball valve for high-pressure acetylene SBAC-C, steel, TPED

With female and male thread

DN 06 / DN 10 mm PN 25 bar

Series 03 – male thread on both sides for non-soldering compression fittings with cutting ring DIN 2353 – heavy-duty series
06 – female thread on both sides DIN ISO 228-1

Temperature range Permissible operating temperatures: -20°C to +65°C

Range of use Ball valve type SBAC-C in the nominal widths of DN 6 and DN 10 is approved for high-pressure acetylene PN 25 as a bundle / in-line valve according to the following standards and directives marked with π , followed by the identification number of the notifying authority: Directive 2010/35/EU about transportable pressure equipment (TPED) Type examination ADR 2013 conformity according to DIN EN ISO 10297:2006

Approvals Directive 2010/35/EU about transportable pressure equipment (TPED) Type examination ADR 2013 conformity according to DIN EN ISO 10297:2006

Technical specification Ball valve type SBAC-C is intended for throughflow and/or shutoff by means of 90° operation of the actuating element for the medium of acetylene with the pressure rating PN 25. The design consists of a block body with connector screwed in on both sides. The stem is fitted blowout-proof from the outside.

Option

Safety locking handle, engaging and lockable as an alternative to the hand lever.

Technical data SBAC-C

Series 03 (male thread on both sides for non-soldering compression fittings with cutting ring DIN 2353 – heavy-duty series)

Block ball valve for high-pressure acetylene NBAC-C, steel With female thread

DN 06 / DN 10 mm PN 25 bar

Series 06 – female thread on both sides DIN ISO 228-1

Identification plate According to DIN EN ISO 15615:2002, test report BAM II-578/2010

Temperature range Permissible operating temperatures: -20°C to +65°C

Range of use Ball valve type NBAC-C in nominal widths DN 6 and DN 10 is tested for high-pressure acetylene PN 25 as a shutoff valve and manually actuated quick-closing facility according to DIN EN ISO 15615:2002 and tested by the BAM; test report BAM II-578/2010.

Technical specification Ball valve type NBAC-C is intended for throughflow and/or shutoff by means of 90° operation of the actuating element for the medium of acetylene with the pressure rating PN 25. The design consists of a block body with connector screwed in on both sides. The stem is fitted blowout-proof from the outside.

Option

Safety locking handle,
engaging and lockable
as an alternative
to the hand lever.

Technical data NBAC-C

Ball valve MSK, Brass With female thread

DN 6 - 80 mm PN max. 40 bar

Series 06 – female thread on both sides DIN ISO 7-1

Temperature range Permissible operating temperature: -10°C to +150°C
Other temperatures on request .

Range of use For non-corrosive liquids and gases
In addition, as a matter of principle, the resistance to the flow medium must be ensured.

Materials	Housing:	Brass nickel-plated
	Ball:	Brass hard-chromium-plated
	Stem:	Brass hard-chromium-plated
	Ball seals:	PTFE
	Stem seal:	PTFE

Technical specification Brass ball valve type MSK is suitable for numerous technical applications with a maximum operating pressure of 40 bar. The range of applications is restricted, in particular, by the materials used.

Technical data MSK

Series 06 (female thread on both sides ISO 7-1)

Ball valve for gas MSG, Brass With female thread

DN 10 - 50 mm PN max. 5 bar

Series 06 – female thread on both sides according to ISO 7-1

Temperature range Permissible operating temperature: -20°C to +60°C

Range of use For non-corrosive liquids and gases
In addition, as a matter of principle, the resistance to the flow medium must be ensured

Approvals DVGW for gas, pressure rating PN 5

Materials	Housing:	Brass nickel-plated
	Ball:	Brass hard-chromium-plated
	Stem:	Brass hard-chromium-plated
	Ball seals:	PTFE
	Stem seal:	NBR/FPM

Technical specification Brass ball valve type MSG is suitable for numerous technical applications with a maximum operating pressure of 40 bar as well as for the operation of flammable gases at a maximum operating pressure of 5 bar. The range of applications is defined, in particular, by the materials used. The stem seal is designed with a maintenance-free O-ring seal.

Technical data MSG

Series 06 (female thread on both sides ISO 7-1)

DN mm	Clear width mm	PN bar	D	L mm	R mm	H mm	Weight kg
10	11	5	3/8"	48	83	43	0.20

For example:

Offshore

In their understandable enthusiasm for renewable energy, people often forget that crude oil remains the most important commodity currently driving the economies of industrialised nations around the world. Without it, everything would literally grind to a halt. Around 25 % of so-called proven reserves can be found off mainland coasts, and one-quarter of the 18 billion litres of crude oil consumed each day is produced offshore. This is the stamping ground of oil rigs, where working conditions are harsh and the equipment deployed is among the most sophisticated you will find worldwide. The route taken by this crude oil via pipelines from the borehole to shoreside facilities or tankers is determined by strict environmental regulations. Our ball valves meet the requirements.

2-way ball valves
with flange connection

Flange ball valve KFK-B, ductile cast iron, short face- to-face length With DIN flange

DN 32 - 250 mm PN max. 16 bar

Series 25 – PN 10 according to DIN EN 1092-1
26 – PN 16 according to DIN EN 1092-1

Face-to-face lengths DIN EN 558 FTF basic series 27 (formerly: DIN 3202-1 Series F4)

Temperature range Standard: -10°C to +150°C, DVGW -20°C to +60°C
On request: -20°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Approvals Series 26: DVGW for gas
TÜV-Component mark
HTB (DN 32 – 150)
Technical instructions on air quality control (TA Luft)

Technical specification The KFK-B type ball valve consists of a 2-part body. Up to nominal width DN 100, the flange is screwed into the body. From nominal width DN 125, the two body parts are flanged together. The stem is blowout-proof with a two-fold O-ring seal. It is possible to attach the actuators via the standard ISO flanged connection.

Flange ball valve KFK-D, stainless steel, short face- to-face length With DIN flange

DN 15 - 250 mm PN max. 40 bar

Series 25 – PN 10 according to DIN EN 1092-1
26 – PN 16 according to DIN EN 1092-1
27 – PN 25 according to DIN EN 1092-1
28 – PN 40 according to DIN EN 1092-1

Face-to-face lengths DIN EN 558 FTF basic series 27 (formerly: DIN 3202-1 Series F4)

Temperature range Standard: -10°C to +150°C; DVGW -20°C to +60°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Approvals Series 26, 28: DVGW for gas
TÜV-Component mark
Technical instructions on air quality control (TA Luft)

Technical specification The KFK-D type ball valve consists of a 3-part body, from DN 50 of a 2-part body. Up to nominal width DN 50, the flange is screwed into the body. From nominal width DN 65, the two body parts are flanged together. The stem is blowout-proof and, from nominal width DN 32 is provided with a two-fold O-ring seal.

Technical data KFK-D

Flanged ball valves with nominal widths DN 15 to DN 50 of series 28 (PN 40) are supplied, as agreed, with swivelling flanges.

Ball valve EFK, stainless steel, economy series With DIN flange

DN 15 - 200 mm PN max. 40 bar

Series 26 – PN 16 according to DIN EN 1092-1
28 – PN 40 according to DIN EN 1092-1

Face-to-face lengths DIN EN 558 FTF basic series 27 (formerly: DIN 3202-1 Series F4)

Temperature range Permissible operating temperature: -10°C to +200°C

Materials	Housing:	1.4408
	Ball:	1.4408
	Stem:	1.4404
	Ball seals:	PTFE
	Stem seal:	PTFE

Technical specification The 2-part stainless steel ball valve with flange, type EFK, is suitable for numerous technical applications with a maximum operating pressure of up to 40 bar. The stem seal is ensured by a packing seal. The output flange according to DIN ISO 5211 is useful through the use of additional add-ons as interfaces to actuators.

Due to the design, not all items are used for all nominal widths. Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet. As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed! Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

EFK 100 26

Flange ball valve KFL-B, ductile cast iron, long face- to-face length With DIN flange

DN 25 - 200 mm PN max.16 bar

Series 25 – PN 10 according to DIN EN 1092-1
26 – PN 16 according to DIN EN 1092-1

Face-to-face lengths DIN EN 558 FTF basic series 1 (formerly: DIN 3202-1 Series F1)

Temperature range Standard: -10°C bis +150°C; DVGW -20°C bis +60°C
On request: -20°C bis +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Approvals Series 26: DVGW for gas PN 16
TÜV-Component mark
HTB (DN 32 – 150)
Technical instructions on air quality control (TA Luft)

Technical specification The KFL-B type ball valve consists of a 2-part body. Up to nominal width DN 100, the flange is screwed into the body. From nominal width DN 125, the two body parts are flanged together. The stem is blowout-proof and, from nominal width DN 32 is provided with a two-fold O-ring seal. It is possible to attach the actuators from DN 32 via the standard ISO flanged connection.

Technical data KFL-B

As a matter of principle, the resistance to the flow medium must be ensured.

Approvals Series 26: DVGW for gas PN 16
Series 28: DVGW for gas PN 40
TÜV-Component mark
Technical instructions on air quality control (TA Luft)

Technical specification The KFL-C type ball valve consists of a 3-part, from DN 100 of a 2-part body. Up to nominal width DN 80, the flange is screwed into the body. From nominal width DN 100, the two body parts are flanged together. The stem is blowout-proof and, from nominal width DN 32 is provided with a two-fold O-ring seal.

Technical data KFL-C

Flanged ball valves with nominal widths DN 15 to DN 50 of series 28 (PN 40) are supplied, as agreed, with swivelling flanges.

Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Approvals Series 26, 28: DVGW for gas
TÜV-Component mark
Technical instructions on air quality control (TA Luft)

Technical specification The KFL-D type ball valve consists of a block resp. forged body with connector screwed in on both sides. The stem is blowout-proof and, from nominal width DN 32 is provided with a two-fold O-ring seal.

Technical data KFL-D

Flanged ball valves with nominal widths DN 15 to DN 50 of series 28 (PN 40) are supplied, as agreed, with swivelling flanges.

Series 25 (PN 10 according to DIN EN 1092-1)

Series 26 (PN 16 according to DIN EN 1092-1)

Series 27 (PN 25 according to DIN EN 1092-1)

Series 28 (PN 40 according to DIN EN 1092-1)

Flange ball valve K-KFK-C, steel, compact face-to-face length With DIN flange

DN 10 - 100 mm PN max. 40 bar

Series 26 – PN 16 according to DIN EN 1092-1
28 – PN 40 according to DIN EN 1092-1

Temperature range Standard: -10°C to +150°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification The K-KFK-C type ball valve consists of a 2-part body with a flange screwed in on one side, or a close-coupled flange. When using the ball valve as an end fitting, the direction of flow must be noted due to the constructional design. Up to nominal width DN 25, the stem is fitted from the outside by means of a fitting. Simple replacement of the stem seal is ensured by the fitting used. A stem seal in accordance with the German Technical Instructions on Air Quality Control (TA Luft) is available as standard from nominal width DN 32 and can be used, on request, up to nominal width DN 25 for an additional charge. Actuators can be attached by means of an extension kit. This retrofit requirement is available as standard.

Flange ball valve K-KFK-CE, steel, economy series With DIN flange

DN 15 –200 mm PN max. 40 bar

General regulations BS EN ISO 17292:2004

Temperature range Standard: -10°C to +180°C
DVGW: -10°C to +60°C

Range of use For use as a shutoff valve (open-closed) for chemical products, foodstuffs, on pipes for gas, air, water supply.
With blowout safety stem.
Antistatic device from DN 25.
Upper connection ISO 5211

Approvals FIRE SAFE according to BS 6755 – API 6 FA API 607
Up to DN 100 DVGW for gas PN 16
TÜV for TA Luft

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!

Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

2-way ball valves
with flange connection

Flange ball valve KFK-BK, ductile cast iron, ceramic lining With DIN flange

DN 50 - 125 mm PN 16 bar

Series 25 – PN 10 according to DIN EN 1092-1

Face-to-face lengths DIN EN 558 FTF basic series 27 (formerly: DIN 3202-1 Series F4)

Temperature range Permissible operating temperature: -10°C to +160°C
Other temperatures on request.

Range of use For abrasive materials. In addition, as a matter of principle, the resistance to the flow medium must be ensured.

Technical specification The KFK-BK type ball valve consists of a 2-part body. Up to nominal width DN 100, the half flange is screwed into the half body. From nominal width DN 125, the two body parts are flanged together. The stem is blowout-proof and is provided with a two-fold O-ring seal. Body, screw-in flange and ball are internally coated with the aluminium oxide ceramic material Alotec 92 and the seal is also manufactured from this material.

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!

Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

up to DN 100

DN 125

Flange ball valve KFB-C/KFB-D, steel/stainless steel, ANSI face-to-face length With ANSI flange

DN 15 – 200 mm max. Class 1500

Also available as stainless steel ball valve: KFB-D

Series 50 – Flansche according to ANSI/ASME B16.5 Class 150 RF/RTJ
51 – Flansche according to ANSI/ASME B16.5 Class 300 RF/RTJ
52 – Flansche according to ANSI/ASME B16.5 Class 600 RF/RTJ
53 – Flansche according to ANSI/ASME B16.5 Class 900 RF/RTJ
54 – Flansche according to ANSI/ASME B16.5 Class 1500 RF/RTJ

Face-to-face lengths Lengths ANSI B 16.10 – Long series RF/RTJ

Temperature range Standard: -10°C to +90°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Approvals TA Luft up to DN 25 optionally, from DN 32 standard

Technical specification Up to DN 80, type KFB-C ball valve consists of a 3-part body with screwed in flanges. From nominal width DN 100, the two body parts are flanged together.
The stem is blowout-proof and, from nominal width DN 32 is provided with a two-fold O-ring seal.

*Standard (can vary according to nominal width), other materials on request.
Due to the design, not all items are used for all nominal widths.

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.
As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!
Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

Flange ball valve, K-KFB-C, steel, compact face-to-face length With ANSI flange

DN 50 und 100 mm max. Class 1500

Series 52 – Class 600 RF
54 – Class 1500 RF
Flanges also according to RTJ are possible

Temperature range Standard: -10°C to +90°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification The K-KFB-C type ball valve consists of a 2-part body with screwed in on one side, or close-coupled flange. When using the ball valve as an end fitting, the direction of flow must be noted due to the constructional design. A stem seal in accordance with the German Technical Instructions on Air Quality Control (TA Luft) is available as standard from nominal width DN 32.
Actuators can be attached by means of an extension kit. This retrofit requirement is available as standard.

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.
As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!
Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

Ball valve with pipe sockets KSAE-C, steel For SAE half flanges

DN 15 - 80 mm PN max. 420 bar

Series 68 – Connections on both sides for SAE half flanges 3000 psi
69 – Connections on both sides for SAE half flanges 6000 psi

Temperature range Standard: -10°C to +90°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification KSAE-C type ball valve consists of a block resp. welded body with connector screwed in on both sides for SAE half flanges. Up to nominal width DN 25, the stem is fitted from the outside by means of a fitting. Simple replacement of the stem seal is ensured by the fitting used. A stem seal in accordance with the German Technical Instructions on Air Quality Control (TA Luft) is available as standard from nominal width DN 32 and can be used, on request, up to nominal width DN 25 for an additional charge. Actuators can be attached by means of an extension kit. This retrofit requirement is available as standard from DN 32. Up to nominal width DN 25, this must be stated when placing the order.

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!

Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

Ball valve KSAE-DR-C, steel With swivelling SAE flanges

DN 15 - 80 mm PN max. 420 bar

Series 68 – Swivelling SAE flanges on both sides 3000 psi
69 – Swivelling SAE flanges on both sides 6000 psi

Temperature range Standard: -10°C to +90°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification KSAE-DR-C type ball valve consists of a block resp. forged body with connector with male thread screwed in on both sides including SAE flanges. The flanges are of a swivelling design due to the threaded connection between the SAE flange and the ball valve fitting. Up to nominal width DN 25, the stem is fitted from the outside by means of a fitting. Simple replacement of the stem seal is ensured by the fitting used. A stem seal in accordance with the German Technical Instructions on Air Quality Control (TA Luft) is available as standard from nominal width DN 32 and can be used, on request, up to nominal width DN 25 for an additional charge. Actuators can be attached by means of an extension kit. This retrofit requirement is available as standard from DN 32. Up to nominal width DN 25, this must be stated when placing the order.

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!

Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

The background image is a photograph of a large-scale industrial chemical processing facility. It features a dense network of pipes, some painted in bright colors like red, yellow, and blue, while others are metallic. Large cylindrical storage tanks or heat exchangers are visible, along with multiple levels of walkways and structural steel beams. The scene is brightly lit, suggesting an outdoor or well-lit indoor environment.

For example:

Chemical installations

No other branch of science is as ubiquitous in daily life as chemistry: pharmaceuticals, plastics, textiles, cosmetics, paints, baking agents, fertilisers, toothpaste, engine lubricants, petrol and CDs. They – and a long list of other products – are all the result of specific chemical processes. Engineers and plant manufacturers offer an extensive range of technologies tailored to the various production methods and processes of relevance to the chemical industry. This includes equipment encompassing high-end components, modules and systems. They ensure that the products brought to life in laboratories around the globe are directed safely to their final destinations – in a manner that is ecologically sound and financially viable. Within these complex structures our ball valves have established a firm place as the ultimate regulatory devices.

vonScheven

2-way ball valves
with weld ends

Ball valve NSK-AL-C, steel With detachable weld ends

DN 8 - 50 mm PN max. 40 bar

Series 40 – with detachable weld ends on both sides

Temperature range Standard: -10°C to +150°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification NSK-AL-C type ball valve is designed as a ball valve with detachable weld ends on both sides. Through the flat sealing, detachable weld ends on both sides, a self-contained fitting can be quickly replaced without the line having to be widened. The stem seal is maintenance-free.

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!

Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

Ball valve VSK-C, steel With weld ends, fully welded

DN 10 - 300 mm PN max. 40 bar

Series 40 – with weld ends, fully welded

Temperature range Standard: Operating pressure is dependent on the operating temperature
 PN 16 = -40 °C to +165 °C
 PN 25 = -40 °C to +140 °C
 PN 40 = -40 °C to +90 °C
 Other temperatures on request.

Range of use The ball valve is suitable for all non-corrosive media such as, e.g. district heating, heating water, cold water for air-conditioning, oil and compressed air.

Characteristics Electric and pneumatic drive units can be subsequently retrofitted on all ball valves by means of special easy-to-fit ISO flanges.

Technical specification The complete valve body and weld ends are welded together. There are no potentially leaking flanged or bolted connections on the valve body. The blowout-proof stem is externally sealed with two O-ring seals and a graphite reinforced PTFE washer pressed on by the media pressure. System safety is ensured by the possibility of replacing the upper O-ring seal up to DN 50 and both O-ring seals from DN 65 to DN 250.

Due to the design, not all items are used for all nominal widths. Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet. As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed! Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

Example of order: VSK-C DN 25 type ball valves with weld ends, fully welded, steel
VSK-C 25 40

Ball valve VSK-D, stainless steel With weld ends, fully welded

DN 10 - 250 mm PN max. 40 bar

Series 40 – with weld ends, fully welded

Temperature range Standard: Operating pressure is dependent on the operating temperature
 PN 16 = -40 °C to +165 °C
 PN 25 = -40 °C to +140 °C
 PN 40 = -40 °C to +90 °C
 Other temperatures on request .

Range of use The ball valve is suitable for all non-corrosive media such as, e.g. district heating, heating water, cold water for air-conditioning, oil and compressed air.

Approvals Electric and pneumatic drive units can be subsequently retrofitted on all ball valves by means of special easy-to-fit ISO flanges.

Technical specification The complete valve body and weld ends are welded together. There are no potentially leaking flanged or bolted connections on the valve body. The blowout-proof stem is externally sealed with two O-ring seals and a graphite reinforced PTFE washer pressed on by the media pressure. System safety is ensured by the possibility of replacing the upper O-ring seal up to DN 50 and both O-ring seals from DN 65 to DN 250.

Due to the design, not all items are used for all nominal widths. Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.
 As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!
 Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

VSK-D 25 40

For example:

Hydraulic control blocks

Boasting a weight of 800 tons, one of the flagships of the mobile hydraulics industry must surely be the heavy-duty excavator that reaches an impressive 16 metres in height when fully outstretched. Based in Canada and operating around the clock, it transfers 8,000 tons of oil sand per hour to a fleet of dumper trucks. Handling such enormous volumes requires high-performance hydraulics and extremely sensitive control components such as hydraulic blocks. These control blocks regulate the pressure, volume and flow of the such fluids and are used in the majority of such systems. Our manifold ball valves are used to diverse, shut off or release the flow of hydraulic fluids.

2/2-way high-pressure block ball valve HBP-C, HBP-D, steel and stainless steel

For manifold installation

DN 6 - 25 mm PN max. 500 bar

Also available as a stainless steel ball valve.
2/2-way manifold ball valves DN 32 to DN 50 on request

Temperature range Standard: -10°C to +90°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification The HBP-C type ball valve has been specially developed for installation on control blocks. The need to use hoses or piping can be avoided through direct flanging on to the control block.
Actuators can be attached by means of an extension kit. This retrofit requirement must be specified when placing the order (additional charge).

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet,
As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!
Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

Due to the design, not all items are used for all nominal widths.

3/2-way high-pressure block ball valve HYPD-C, HYPD-D, steel and stainless steel

For manifold installation

DN 6 - 25 mm PN max. 500 bar

3/2-way manifold ball valves DN 32 to DN 50 on request.

Temperature range Standard: -10°C to +90°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification The HYPD-C type three-way changeover ball valve has been specially developed for installation on control blocks. The need to use hoses or piping can be avoided through direct flanging on to the control block. When using this ball, please note that, concerning the seal, this is a changeover ball valve. Pressure inlet must therefore be in the centre. Actuators can be attached by means of an extension kit. This retrofit requirement must be specified when placing the order (additional charge).

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet,
As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!
Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

Ball valves for manifold installation

For example:

Forging technology

Among all the metalworking processes, hand forging is the oldest and perhaps most fascinating of all.

Anvils, water power hammers and corporal strength, however, have long since been replaced by huge forging presses and equally impressive processing equipment. Here, tremendous forces of 120 MN have to be channelled with pinpoint precision to manipulate metal items weighing as much as 200 tons. It goes without saying that the hydraulics involved in this process also have to be up for the task. We are proud of the fact that our ball valves have a role to perform in this magnificent play of forces.

3-way changeover ball valve DBI-C, steel With female thread

DN 4 - 50 mm PN bis 500 bar

Series 06 – female thread on all sides DIN ISO 228-1

Temperature range Standard: -10°C to +90°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification Up to DN 25, the ball valve type DBI-C consists of a block body, from DN 32 it consists of a forged body with connector screwed in on both sides.
When using this ball valve, please note that, concerning the seal, this is a changeover ball valve. Pressure inlet must therefore be in the centre. Actuators can be attached by means of an extension kit. This retrofit requirement must be specified when placing the order (additional charge).

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!

Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

12	16	500	M 24x1.5	14	96	45	65	45	19	85	130	10	0.9
16	20	500	M 30x2	16	105	45	67	50	19	85	130	10	1.1
20	25	320	M 36x2	18	110	55	79	55	25	95	130	10	1.4
25	30	320	M 42x2	20	132	65	91	65	30	111	160	10	2.4
32	35	160	M 52x2	22	136	Ø70	104	93	38	155	250	17	4.0

Note! The pressure rating of the pipe unions can deviate from the nominal pressure rating of the ball valve.

Example of order: Ball valve type DBA-D of steel, DN 12 with male thread for non-soldering compression fittings with cutting ring DIN 2353 – light-duty series with L-ball (please state ball hole form)
DBA-D 12 02-L

Parts list DBA-D

Pos.	Designation	Material*
10	Body	Stainless steel
20	Fitting	Stainless steel
30	Ball	Stainless steel
40	Seal	POM
50	Stop washer	
60	Stem	Stainless steel
80	O-ring	FPM
90	Hand lever	Zinc die-casting
100	O-ring	FPM
110	Bolt	
120	Washer	
130	Sliding ring	PTFE
140	Stop pin	

*Standard (can vary according to nominal width), other materials on request.
Due to the design, not all items are used for all nominal widths.

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.
As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!
Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

3-way changeover ball valve DBF-C, DBF-D, steel, stainless steel With flange connection

DN 25 - 100 mm PN bis 40 bar

Series 26 – PN 16 according to DIN EN 1092-1
28 – PN 40 according to DIN EN 1092-1

Face-to-face lengths DIN EN 558 FTF basic series 1 (alternatively: DIN 3202-1 Series F1)

Temperature range Standard: -10°C to +150°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification DBF-C and DBF-D type ball valves consist of a 3-part body. The stem is blowout-proof and, from nominal width DN 32 is provided with a two-fold O-ring seal.
When using these ball valves, please note that, concerning the seal, this is a changeover ball valve. Pressure inlet must therefore be in the centre. Actuators can be attached by means of an extension kit. This retrofit requirement must be specified when placing the order (additional charge).

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!

Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

*Standard (can vary according to nominal width), other materials on request.
Due to the design, not all items are used for all nominal widths.

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.
As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!
Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

For example:

Longwall systems

Gone are the days in which miners were accompanied by pit ponies for a long day of sweat and toil, assisted by a trusted canary to detect imminent danger from toxic gases. Today, pit ponies have been replaced by conveyor belts, pickaxes by shearers and mine props by high-tech hydraulic roof supports. The latter have a bearing force of 1,000 tons and more, thus offering maximum underground protection for humans and machinery. State-of-the-art longwall systems rely on complex hydraulics technology – featuring long hose lines and our ball valves. Designed and engineered for heavy-duty mining applications, they ensure the very best in reliability and safety.

C = Steel version
D = Stainless steel version

High pressure compact ball valve HBSK-C, HBSK-D, SIBK-C, steel With Steck-O connector

DN 10 - 31 (32) PN max. 500 bar

Also available as a stainless steel ball valve.

Series 15 – male - female connectors
16 – female - female connectors

Temperature range Standard: -10°C to +90°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification Ball valves HBSK-C, HBSK-D and SIBK-C are designed as compact ball valves with fixed female connector integrated in the body and screwed-in connector. The stem is fitted blowout-proof from the outside. Fast fitment in suitable HD line systems is possible by means of the male/female connection variant. With the safety locking handle (SIBK-C) option, apart from the one-sided lock in closed position, the positions can also be fixed on both sides. Also available with locking capability.

On request: -50°C to +230°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification HKS-C and HKS-D ball valves are designed as ball valves with fixed female connector. The stem is fitted blowout-proof. Fast fitment in suitable HD line systems is possible by means of the male/female connection variant.

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!

Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

3-way changeover ball valve DBS-C, DBS-D, steel With Steck-O female

DN 10 - 31 (32) PN bis 500 bar

Also available as a stainless steel ball valve.

Series 16 – all-round female connector DIN 20043

Temperature range Standard: -10°C to +90°C
On request: -50°C to +230°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification The DBS-C and DBS-D type ball valves consist of a block body with connector screwed in on both sides. The stem is fitted blowout-proof. Actuators can be attached by means of an extension kit. This retrofit requirement must be specified when placing the order (additional charge).

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!

Low pressure mining ball valve MKA-C, steel With male pipe thread

DN 10 - 50 mm PN max. 100 bar

Series MKA 05 – Pipe thread DIN 259 with lock nut – pipe thread DIN 259 with taper
10 – Pipe thread DIN 259 with lock nut – round thread DIN 20029 with taper

Temperature range Standard: -10°C to +90°C
On request: -50°C to +250°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification Ball valve MKA-C is specially developed for use in low pressure applications. A male pipe thread is integrated in the housing, whilst a round thread or a male pipe thread with internal taper is screwed in as a connector. The stem is fitted blowout-proof. Hoses or pipeline components can be countered with the standard lock nut.

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!

Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

Preloaded non-return valve VRSV-C, VRSV-D, steel With Steck-O

DN 10 - 51 (50) PN bis 500 bar
Opening pressure: about 1 bar

Also available in stainless steel.

Temperature range Standard: -10°C to +90°C
On request: -50°C to +230°C

Range of use Liquids: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
Gases: Liquids group 1 and 2 according to PED 2014/68/EU Article 13
As a matter of principle, the resistance to the flow medium must be ensured.

Technical specification VRSV-C and VRSV-D preloaded non-return valves consist of a steel body with fittings screwed in on both sides. The valve stem of brass is sealed by a stainless steel spring on a POM gasket. The direction of flow is evident from the direction sign on the outside.

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!

Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

*Standard (can vary according to nominal width), other materials on request.

Up to DN 20, the Steck-O female connectors are swivel design, above they are fixed.

With different connections, the required direction of flow must be stated.

Due to the design, not all items are used for all nominal widths.

Hose breakage safety valve V-SB, steel

DN 25 - 80 mm PN bis 16 bar

Temperature range Permissible operating temperature: -10°C to +90°C

Technical specification The flow cross-section between the clear valve housing and the valve taper is greater than the flow cross-section of the valve face. The force of the compression spring is only slightly higher than the pressure difference that is required to overcome the flow resistance of the flowing medium through the free cross-section between the clear valve housing and the valve taper. The valve is thus kept open by this pressure difference. Where a considerable drop in pressure occurs between the valve and the consuming device, due to breakage or rupture of the compressed air pipes, the valve taper is then pressed against the valve seat which interrupts the through flow. Due to the small bore in the valve taper, a small quantity of compressed air can flow through which on the one hand is no longer able to cause any knocking of the hose, on the other hand, after the hose has been repaired, the space between the valve and the consuming device is refilled until pressure compensation is achieved so that the valve taper is raised by the compression spring from the valve seat, thus releasing the full through flow again.

These valves have been tested for use by the DMT Institute.

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!

Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

Water spray valve V-KV-C, brass, stainless steel With Steck-O

DN 10 PN bis 500 bar

Technical specification The piston valve V-KV-11-5-3 operates positively, i.e. it is opened by hydraulic pressure and immediately closed by spring load when the hydraulic pressure ceases. The actuating pressure to release the cooling water is preferably taken by the powered cylinder, although it can also be connected to other switch functions, e.g. to the sliding cap. The piston valve V-KV-11-3 operates "bi-stabile", i.e. through the pulse circuit it automatically stays open and sprays until a closure pulse (HD2) terminates the spraying process.

Please ask separately, where requirements exceed the standard conditions of use listed in this data sheet.

As a matter of principle, the operating and maintenance instructions, in particular the safety instructions must be observed!

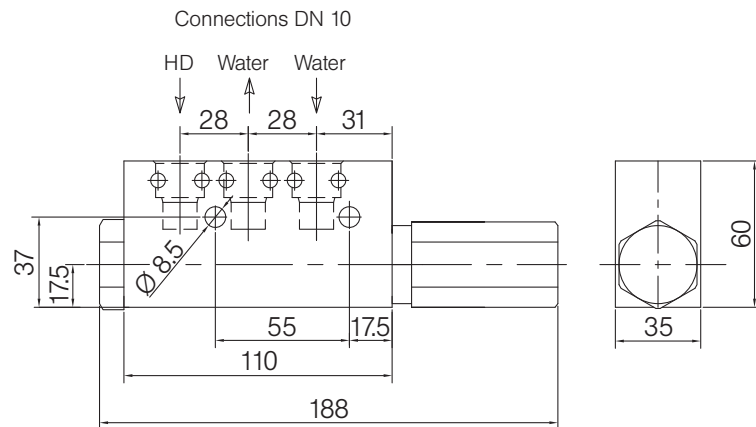

Operating and maintenance instructions as well as the approval certificates can be downloaded at www.von-scheven.de.

We reserve the right to carry out technical modifications.

Snow cannons

Artificial snow is an issue for heated debate not only in the Austrian region of Zillertal. With so much at stake, environmental and financial philosophies tend to be diametrically opposed. Reservoirs, pumping stations, pipelines, hydrants, cooling towers, snow cannons and guns – the task of making snow for winter fun and frolic can be quite a challenge. While often covered with excessive amounts of artificial snow in the past, pistes are now transformed into a winter wonderland in a much more targeted manner with the help of GPS and specialist measuring equipment. This translates into cost savings of around 25 %. Additionally, snowmaking devices have been optimised, e.g. for improved water dosage. Our ball valves have been instrumental in this progress – for good reason.

Type SP – double acting
Type SPF – spring resetting

Actuators SP, SPF Pneumatic

Design Pneumatically actuated double piston swivel actuator in double and single acting (spring resetting) version.
 Swivel angle 90°, 120°, 180° and 240°. Additional special swivel angles as well as 3-position drives available.

Torque 5 to 8000 Nm

Actuating pressure 2 to 10 bar

Control medium Filtered air according to PNEUROP/ISO Class 4, additional media on request

Temperature range Standard: from -50°C to +70°C
 Auf Anfrage: -50°C to +200°C

Mechanical interfaces ISO 5211, NAMUR VDI/DE 3845

Mode of operation Double acting function:
 The two internal or external drive chambers are supplied with compressed air in line with the rotational direction.

Single acting function:
 Only the internal chambers are supplied with compressed air; the return stroke is implemented by the fitment of springs. The number of springs can be matched to the operating conditions.

Technical specification Our ball valves are mostly automated by means of pneumatic actuators. As a manufacturer of ball valves, we can resort to the most diverse third party products in line with customer requirements. We can also use a partner product that has been proven for decades. These are shown here with their technical data.
