### At your side, everywhere

As an internationally leading company specialising in high-pressure technology, Maximator develops high-performance products and solutions for a variety of uses and applications in the field of high pressure testing and production equipment, hydraulics and pneumatics.

We produce high pressure pumps, air amplifiers, gas boosters and high-pressure technology such as valves, fittings, pressure switches and other components. We also offer extensive services in the field of high-pressure testing and production technology. Our devices satisfy the requirements of the pressure equipment, machinery and ATEX directives and, on request, NACE specifications. We follow strict quality guidelines certified according to ISO 9001.

In order to ensure the continuous further development of our products, we maintain a close cooperation with our customers as well as with material and component suppliers. With four technical offices in Germany and

qualified partner companies worldwide, we can offer optimal customer service. A total of over 400 qualified, highly motivated employees work at our production centre in Nordhausen.

MAXIMATOR has been designing and manufactaring high pressure equipment for more than thirty years and has a worldwide reputation for quality and reliability, backed by one of the best service organizations in the industry.

## Medium Pressure Valves to 22,500 psi (1,550 bar)

Maximator Medium Pressure Valves with metal to metal seats have a high level of safety and reliability under adverse operating conditions.

» Sizes 1/4 to 1 inch

## Double Block and Bleed Valves to 22,500 psi (1,550 bar)

Double Block and Bleed Needle Valves are three stem manifold valves designed for blocking and bleeding in test and pressure monitoring applications as well as for chemical injection or drain line isolation up to 22,500 psi (1,550 bar).

## Air Actuated Valves to 15,200 psi (1,050 bar)

Air Actuated Valves are a great option for process automation, pressure control or safety devices in high pressure test and production systems.

» From slow fill processes in compact filling stations up to high flow rates for hydrogen refilling stations for busses, trucks and trains

## Medium Pressure Fittings to 22,500 psi (1,550 bar)

Maximator Medium Pressure Fittings are designed for use with the 15V series air actuated hydrogen valves and 21V series medium pressure valves and medium pressure tubing

» Sizes 1/4 to 1 inch, also available with variable connections

### Check Valves to 22,500 psi (1,550 bar)

Especially for hydrogen applications, where best of class sealing ability is required, Maximator developed their Cone Check Valve series design with a highly media compatible soft sealing system and improved spring guide.

### Filters to 22,500 psi (1,550 bar)

Cup-Type Filters are used when maximum filtration surface area down to a single micron size is required. They are used to filter gases or liquids in high pressure systems. Angle type filters allow easy in-situ replacement of the filter elements.

#### **Tubing & Tools**

Precise tools are necessary for manually coning and threading tubing. Maximator offers these tools, allowing for the coning and threading of medium and high pressure tubing up to 9/16" O.D.

#### **Gas Boosters**

The Maximator high pressure gas boosters are suitable for the oil free compression of gases and air. Industrial gases like argon, helium, nitrogen and hydrogen can be compressed to operating pressures of 2,400 bar (36,000 psi).

## Competence in hydrogen

Maximator GmbH successfully develops complex systems in highpressure and testing technology, hydraulics and pneumatics and has been the market leader in these segments for decades.

Maximator has many years of experience with components, power units and test systems especially for hydrogen applications. We give professional advice, plan projects and supply testing and manufacturing systems. We also develop special solutions precisely customised to the requirements of our customers.

Our high-performance service department not only carries out the installation and maintenance of the machines, we also inspect and retrofit our products, both nationally and international. In our own testing laboratories it is possible to test the product before the start of the project; we also carry out exceptional individual and series testing for your hydrogen products.

# Hydrogen technology reduces CO<sub>2</sub> output - But is it safe?

Many components for the development of this future technology are exposed to extreme stresses. Maximator meets this challenge with innovative high pressure test technology for hydrogen components such as valves, pipes or CGH vessels.

We can carry out all legally prescribed testing on pressure bearing components with our test technology: from individual acceptance to type approval testing. We also offer gas control technology for hydrogen applications - approved effective and reliable technology for automotive manufacturers and suppliers.

## What you need to know

Hydrogen is a colourless, odourless and flavourless gas and therefore cannot be detected with our human sensory organs. Hydrogen burns with invisible flame and radiates only little heat in this process.

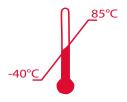

When mixing with air in a ratio of 4 to 76 percent by volume (vol. %) of hydrogen a detonating gas develops that already can be brought to explosion by a low-energy spark. Oxygen-hydrogen mixtures with a fraction of below 10.5 percent by volume are heavier than air and sink to the floor.

## Physical and chemical properties

| colourless gas   |
|------------------|
| odourless        |
| 2 g/mol          |
| -259 °C          |
| -253 °C          |
| -240 °C          |
| 560 °C           |
| 4 %(V) - 75 %(V) |
| 0,07             |
| 1,6 mg/l         |
|                  |

## Special features of Maximator H<sub>2</sub> Valves

#### **Temperature range**

- Selection of seal materials for a temperature range of -40°C to +85°C
- Temperature range according to ISO19880-3 and ANSI/SAE HGV 4.7

#### **Choice of material**

- Predominantly use of austenitic stainless steels, evaluated for their suitability in high pressure hydrogen applications
- Use of 1.4404 (SST 316L) as body material with minimized risk of hydrogen embrittlement for high durability
- Material 1.4980 (A286) and 1.4542 (17-4PH) for valves stems where compression stresses prevail

#### Leakage

- Internal leakage of seat/stem as well as external leakage over seal are bubble tight
- Leak testing of valves with helium for internal and external leakage for air operated valves
- Valves are in the qualification process in order to meet the requirements of ISO 19880-3

#### **Seals**

- Special seal designs are used for air operated valves instead of conventional packings in order to maintain their initial tension
- Lifetime related to opening and closing cycles is much higher compared to conventional packing designs

#### Lubrication

- Lubricant used for functionality of valves has been selected especially for hydrogen applications
- . No chemical reactions with the media are going to happen

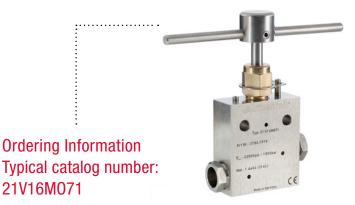

#### Cleaning

- Use of special cleaning process in order to reduce hydrocarbons and particles
- · Avoidance of fuel cell contamination which would effect the life time

## **Medium Pressure Valves**

## » Pressures to 22,500 psi (1,550 bar)

## Medium pressure valves

Maximator Medium pressure valves with metal to metal seats have a high level of safety and reliability under adverse operating conditions. These valves may be used both with gases and liquids.

Traceability is ensured through extensively documented data (batch number, maximum pressure, material number, type designation). All medium pressure valves include glands and collars.

## Options for Medium pressure valves

#### **Special Designs for Extreme Temperatures**

Standard valves are supplied with Teflon / Carbon packing and may be operated to 450°F (230°C). High temperature packing and / or extended stuffing box are available for service from -423°F to 1200°F (-252°C to 650°C) by adding the following suffixes to catalog order number.

- B standard valve with cryogenic trim materials and Teflon packing to -100°F (-73°C).
- LT extended stuffing box valve with teflon packing and cryogenic trim materials to -423°F (-252°C).

For further available options and more detailed information please refer to our VFT catalogue.

#### Double Block and Bleed Needle Valves

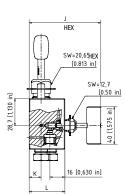

Maximator series DBBNV Double Block and Bleed Needle Valves with metal to metal seats have a high level of safety and reliability under adverse operating conditions. Double Block and Bleed Needle Valves are three stem manifold valves designed for blocking and bleeding in test and pressure monitoring applications as well as for chemical injection or drain line isolation up to 22,500 psi (1,550 bar).

Due to the standard valve packing and Vee stem design, Maximator double block and bleed needle valves are very compact and easy to use. In addition, manifold style valves reduce the number of fittings and space required for installation.

#### **Characterictics**

- · Compact integrated design for high leak integrity
- Flow through function to dispenser filling hose
- Double porting on left hand side eliminates need for Tee type fitting
- · Normally open valve for pressure release after filling
- Bottom port for optional pressure relief valve or rupture disc installation
- Adjustable orifice to limit noise emissions during pressure release
- · Cone check valve at outlet in order to avoid contamination from vent line
- · Low wear because of optimal choice of materials of construction

#### **Technical Data and Dimensions**

**Technical Data** 

Operating temperature: -40°C / +85°C

Drive pressure: 58 psi-116 psi (4-8 bar)

Operating pressure:

15,200 psi (1,050 bar)

**Materials** 

1.4404 (SST 316L) Valve body:

Valve stem: 1.4980 Seal needle valve: **UHMWPE** Seal check valve: PEEK

#### **Dimensions**

Height: 5. 217 in. (133 mm)

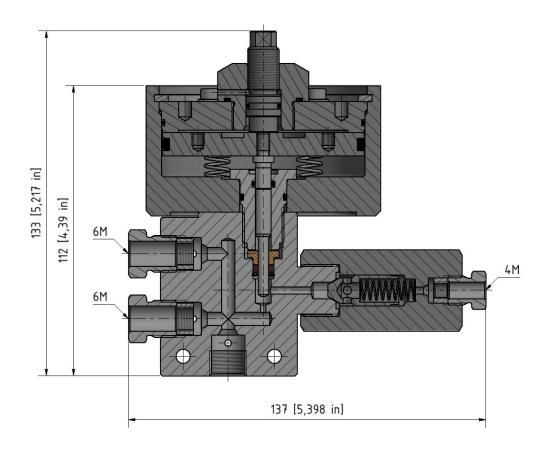

Net weight: 2.9 kg

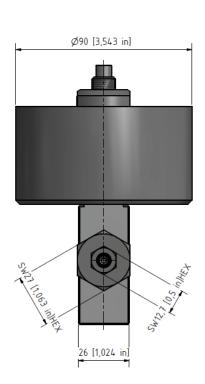

Diameter: 3.543 in. (90 mm)

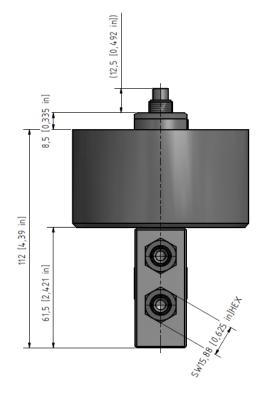

Orifice: 2.0 mm Actuator: 3MN0

The valves are marked with an EX sign and are in conformity to Group II Category 2G Explosion group IIC constructive safety.

## Air Actuated Valves

» Pressures to 15,200 psi (1,050 bar)

## Air Actuated H<sub>2</sub> Valves

- Standard type for hydrogen refilling stations for passenger cars
- Use for shut-off at compressor, distribution at gas storage banks
- Shut-off function for dispenser filling hose

# Medium Pressure Fittings

# » Pressures to 22,500 psi (1,550 bar)

## Medium pressure fittings

Maximator medium pressure fittings are designed for use with the 15V series hydrogen valves and 21V series medium pressure valves and medium pressure tubing. All medium pressure fittings have coned and threaded type connections. Mounting holes are standard on all elbows, tees and crosses.

# Medium Pressure Fittings - variable connections

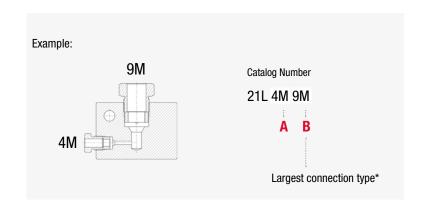

» Pressures to 22,500 psi (1,550 bar)

### Medium pressure fittings with variable connections

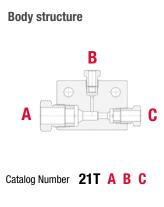

Maximator also offers medium pressure elbow, tee and cross fittings with variable connections. The dimensions depend on the largest connection type. All medium pressure fittings have coned and threaded type connections. Mounting holes are standard on all elbows, tees and crosses.

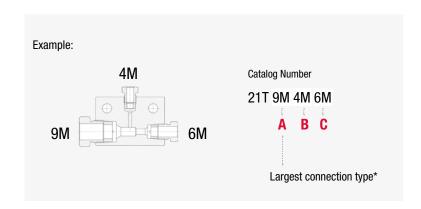

#### **Elbow**

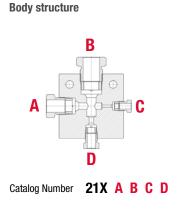

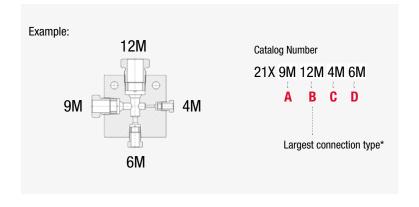

#### Tee

#### Cross

# **Anti-Vibration Collet Gland Assembly**

» Pressures to 22,500 psi (1,550 bar)

## Anti-vibration collet gland assemblies

Maximator anti-vibration collet gland assemblies are for use in applications where there could be extreme external mechanical vibrations or shock in tubing lines. These collet gland assemblies are interchangeable with the standard medium pressure coned and threaded tube connections.

In a normal coned and threaded tube connection, any external mechanical loading on the tubing lines, valves or fittings would be concentrated on the first thread of the tube. This can cause failure of the tube at this thinner cross-section. The anti-vibration collet gland assembly grips the tube behind the connection, supporting the tube at the full cross-section and straight area, moving the loading away from the threaded area.

The back part of the assembly has a gland nut that, when tightened properly, compresses a split collet on the tube, providing the beneficial gripping action. All anti-vibration collet gland assemblies come with a Molybdenum Disulfide Coating to guard against galling of the stainless components.

### **Ball Check Valves**

Ball Check Valves prevent reverse flow where bubble tight shut-off is not mandatory. These check valves are designed with a ball cradled floating poppet to assure positive inline seating. This poppet design allows full flow around the ball to minimize pressure drop. Check valves are rated to 660°F (350°C). All check valves are supplied with glands and collars. These check valves are not to be used as a relief device. The opening pressure of the Ball Check Valves is approx. 20 psi (1.5 bar).

### Cone Check Valves

Especially for hydrogen applications, where best of class sealing ability is required, Maximator developed their cone check valve series design with a highly media compatible soft sealing system and improved spring guide. This series is available for Medium Pressure applications up to 22,500 psi (1.550 bar) with 4M to 16M connection.

## **Line Filters**

## » Pressures to 22,500 psi (1,550 bar)

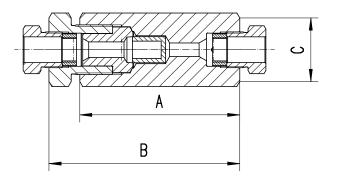

## **Cup-Type Line Filters**

Maximator Cup-Type Line Filters are used when maximum filtration surface area and a single micron size element is preferred. This design increases the filter area as much as 6 times the area of the disc type filter, and will permit higher flow rates with a lower pressure drop, and longer intervals between element changes. Filter elements come standard in 5, 30, or 56 micron sizes and are easily replaced. Filters are rated for temperatures -423°F to 660°F (-252°C to 350°C). All line filters come with glands and collars.

# **Angle Filters**

## » Pressures to 22,500 psi (1,550 bar)

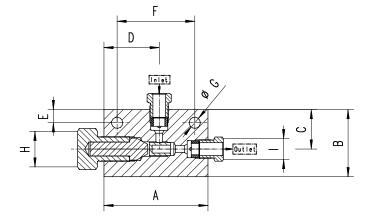

### **Angle Filters**

Maximator Angle Filters are used to filter gases or liquids in high pressure systems. The filter elements can be easily changed in-situ. The special design allows the exchange of the filter element without the need to first disassemble the filter in front of the tubing. Filter elements are made of sintered material with pore sizes of 5  $\mu$ m, 30  $\mu$ m or 56  $\mu$ m. Filters are rated for temperatures -423°F to 660°F (-252°C to 350°C). All angle filters come with glands and collars.

It is recommended that all fluids entering a high pressure system be thoroughly cleaned.

Maximator filters are designed to remove small amounts of process particles. Pressure differential should not exceed 1000 psi across the filter elements. All dimensions for reference only and are subject to change.

All technical and dimensional information subject to change. All general Terms and Conditions of sale, including limitations of our liability, apply to all products and services sold.

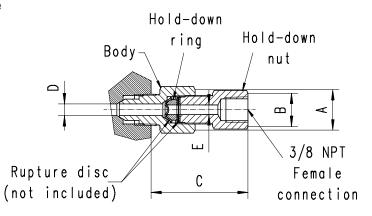

# Safety Head Assembly

## » Pressures to 22,500 psi (1,550 bar)

### Safety head assemblies

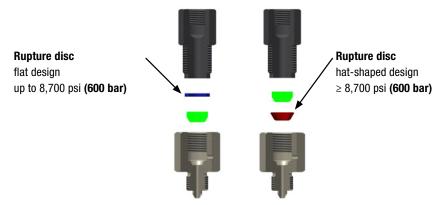

Maximator safety head assemblies are used to provide over-pressure protection to high pressure systems. These safety head assemblies are to be used with the appropriate 1/4" angular rupture disc listed on the next page.

# 1/4" Rupture Discs

## 1/4" Rupture discs

1/4" angular and flat seat rupture discs are designed to be used with the safety head assemblies that are shown on page 13. Minimum rupture disc pressure ratings should be at least 110% of system operating pressure. The standard material is 1.4404 (SST 316L). The pressure ranges indicated in the table below are at room temperature (22°C/72°F).

Other materials and pressure ranges are available upon request.

Rupture Discs are individually packed and marked type plate.

# Medium Pressure Tubing

» Pressures to 22,500 psi (1,550 bar)

## **Medium Pressure Tubing**

Maximator offers a line of cold drawn thick wall tubing, with flow areas to compliment the large orifce medium pressure valves and fittings. This tubing is made under strict manufacturing and quality control standards and inspections, with dimensional tolerances to match the requirements of the medium pressure coned and threaded connections.

The standard material is 1.4404 (SST 316L). Other materials may be provided on special request, depending on the specific material, diameters and lengths.

| Normal Tubing Size<br>in. (mm) | Tolerance O.D<br>in. (mm)              |

# Coned and Threaded Nipples

## » Pressures to 22,500 psi (1,550 bar)

## Coned and threaded nipples

Maximator offers a line of coned and threaded medium pressure tube nipples in a variety of lengths for all standard tube sizes. The coned and threaded medium pressure tube nipples are available in 1.4404 (SST 316L).

They are also available in the 15,200 psi (1,050 bar) or 22,500 psi 1,550 bar) versions for the 9/16", 3/4" and 1" OD tube sizes. See chart below for ordering information.

Special length coned and threaded nipples are available upon request. Consult Maximator for availability and price

## VFT-ToolBoXX Type CTTB

The MAXIMATOR VFT-ToolBoXX Type CTTB provides order and clarity for your coning and threading tools.

The ToolBoXX is available in 3 versions:

Complete: tube dimension 1/4", 3/8" and 9/16" of the

Medium, High and Ultra High Pressure series

Medium Pressure: tube dimension 1/4", 3/8" and 9/16" of the

Medium series

**High Pressure:** tube dimension 1/4", 3/8" and 9/16" of the High

and Ultra High Pressure series

By using a pre-formed foam inlay each tool has its defined place in the ToolBoXX:

- · Coning tool, complete
- Collet chuck and cutting plate
- · Threading tool complete and cutting oil
- · Guide bushings and threading dies
- Deburring tool with 2 deburring heads
- Step-by-step instruction
- · L-BoXX tool case, impact-resistant (ABS plastics)

- 1 Coning tool
- 2 Chuck key
- 3 Collet chuck
- (4) Coning Blades
- 5 Threading tool
- Guide bushing & threading dies
- 7 Cutting oil 100 ml
- 8 Deburring tool
- 9 Deburring head ø10,4 & ø16,5 mm

## Gas boosters

## » Type DLE

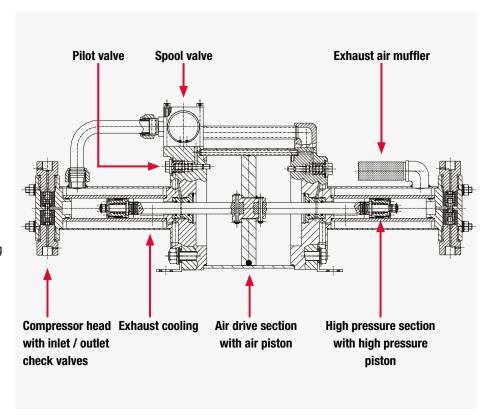

## High pressure gas boosters – the Maximator concept

The Maximator high pressure gas boosters are suitable for the oil free compression of gases and air. Industrial gases like argon, helium, nitrogen and hydrogen can be compressed to operating pressures of 2,400 bar (36,000 psi) and oxygen up to 350 bar (5,075 psi), depending on the application. Air driven gas boosters are an efficient alternative instead of electrically driven products and can be used in explosion-proof areas (according to 2014/34/EU).

#### The Gas boosters in detail

#### Features at a glance

- » Pressure regulation via manual pressure regulator or pneumatically actuated valve
- » Operation with compressed air allows use in explosion-proof areas
- » Gas booster automatically stops operating upon reaching pre-selected final pressure
- » Gas booster restarts automatically to compensate leaks
- » No power consumption during long pressure holding periods
- » No heat generation during pressure holding period
- » Easy installation and trouble-free handling of gas boosters
- » Low maintenance thanks to reliable, easy-to-install devices
- » Effective cooling of the high pressure cylinders through integrated exhaust air cooling

## **Function and operation**

The Maximator gas boosters' operating principle is similar to a pressure intensifier. A large air piston is charged with low pressure (air piston) and works on a small area with high pressure (high pressure piston).

The continuous operation is achieved by a pilot operated 4/2 way valve (spool valve). The spool valve applies the drive air alternately to the upper and bottom surface of the air piston.

The spool is piloted through two 2/2 way valves (pilot valves) which are mechanically actuated through the air piston in its end positions. The pilot valves charge and discharge the spool chamber.

The high pressure piston supported by the check valves (inlet check valve and outlet check valve) delivers the flow.

The outlet pressure is directly related to the set air drive pressure. According to the formulas indicated in the technical features table for the gas boosters, the static end pressure can be calculated.

At this pressure a force balance between drive section and gas section is achieved. The booster stalls when this end pressure is reached, and does not consume any further air.

A pressure drop at the high pressure side or a pressure increase at the drive side starts the booster automatically until the force balance is achieved again.

Additionally the Maximator boosters can be switched on and off automatically through Maximator air pilot switches, contact gauges or external control devices.

#### Notice:

Purging plans for compression of combustible gases using Maximator gas boosters are explained in detail in the operators manual available on our website www.maximator.de.

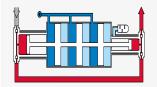

# Product range overview

### The series and its functions

Maximator gas boosters offer the right solution for every application. As a result of the wide range of models it is possible to select the optimum booster for each application. Single stage or two stage boosters, single acting, double acting, quadruple acting or a combination of these models can be used to achieve different operating pressures and flow capacities. They are suitable for different or stepped flow rates as well as for different maximum allowable operating pressures. In addition to gas boosters with a Ø 160 mm drive (DLE series), Maximator also offers various models with a Ø 200 mm drive (8DLE series) for high volume flows.

### 160 mm - Drive (Standard DLE-Series):

| One Air Drive Section    | -   | Two Air Drive Sections |   |

### 200 mm - Drive (8DLE-Series for high volume flow applications):

#### **Two Air Drive Sections One Air Drive Section** Single stage - quadruple acting Single stage - quadruple acting 1:1.65 max. 300 bar max. 40 bar 8DLE 1,65 **8DLE 3**

For further available options and more detailed information please refer to our Gas Booster catalogue.

# » Flow capacity

The flow capacity of gas boosters mainly depends on the air drive pressure and, in the case of double-acting or two-stage devices, also on the gas inlet pressure. Detailed performance curves can be found in the data sheets for the various gas booster types at www.maximator.de. The flow capacity tables shown here contain rounded values and are used to compare the gas booster types. Please consult Maximator to determine the expected performance characteristics for a specific application.
